

# General and Laparoscopic Surgery

# The Latest in Technologically Advanced Minimally Invasive and Robotic Surgery

Our surgeons at New York-Presbyterian Queens, in collaboration with Weill Cornell Medicine, treat a wide range of conditions with minimally invasive approaches. Using the most advanced technology such as laparoscopy and robotic surgery, they perform complex procedures through the smallest possible incisions with decreased blood loss and minimized infection rate. These groundbreaking techniques allow the patient to recover faster and experience less pain and scarring after surgery.

Our board-certified surgeons are leaders in the minimally invasive surgery field. They are able to treat numerous gastrointestinal diseases and other conditions that include:

- Gallstones
- Biliary dyskinesia
- Gastroesophageal (acid) reflux
- Benign and malignant stomach tumors
- Benign and malignant small bowel tumors
- Disorders of the spleen (ITP, spherocytosis, hemolytic anemia, tumors)
- Achalasia
- Adrenal tumors

Using innovative techniques that minimize patient discomfort, our hernia specialists repair all types of hernias:

- Umbilical hernia
- Inguinal hernia
- Ventral hernia
- Complex incisional hernia
- Hiatal and diaphragmatic hernia

Our dedicated and dynamic surgeons perform the following procedures:

- Laparoscopic removal of the gallbladder
- Laparoscopic surgery for stomach cancer and gastrointestinal stromal tumors (GIST)
- Laparoscopic Heller myotomy
- Laparoscopic anti-reflux procedures (fundoplication)
- Laparoscopic hiatal and paraesophageal hernia repair
- Laparoscopic surgery for adrenal tumors
- Laparoscopic splenectomy
- Laparoscopic inguinal hernia repair
- Laparoscopic and robotic ventral hernia repair
- Robotic repair of complex incisional hernias and abdominal wall reconstruction
